We today announce that tX-USBultra is available. SOTM tX-USBultra is a 2 ports USB regenerator and jitter cleaner designed for the best USB audio performance.

### tX-USBultra Introduction

SOTM **tX-USBultra** is designed to reach to the goal which improves sound quality. It works as a hub by receiving and distributing USB audio signal, but regenerating the USB AUDIO signal by the high-performance super clock module, sCLK-EX, installed inside of the product, so that sound could be superior to any other USB audio product and step into the upgraded sound.

The **sCLK-EX** is the super clock module can be used for all digital devices that require clock signals such as a DAC, USB host card, CD player and PC main board, etc. The sCLK-EX could synchronize with a high precision clock such as the rubidium clock. You are able to reach to the completely new sound stage by the sCLK-EX even though your system is based in already advanced technology and good sound.

### What is sCLK-EX then?

### Pricing and Availability

[tX-USBUltra : US\\$990](#)

[tX-UBUltra with the external master clock option: US\\$1200](#)

[sCLK-EX : starting from US\\$700. Variable from how many outputs enabled and depends on options.](#)
